

About Us

Aluminum contract casting: In our plant, aluminum casting has addressed to many sectors leading by automotive sub-industry. Essential casted products are the many special parts with big weights like automotive side-industry parts, flywheel casings, oil crankcases, gearbox casings. We can make special production for our customers in direction of their own demands.

Our company began its activity within contract aluminum casting sector in 2009 and has continued on its way with our experienced and dynamic staff who gave service for long years in this sector and adopted customer-focused working philosophy and did not compromise on innovation and quality.

Our company which gives its services primarily in contract-aluminum sand-casting sector which is the main branch of the company, has also given services to many sectors stated below.

-Automotive Main- and Side-Industry Parts

-Machinery Manufacture Industry Parts

-Vehicle flywheel Casings

-Agriculture Machinery Parts

-Air Compressor Parts

-Pump Body Parts

Aluminum Die Casting: Our company which has the experience of years in aluminum die casting has performed casting processes in a quality and faster manner by this method. We have realized your aluminum casting works in time and without sacrificing quality thanks to our ready moulds or to your projects specific mould pattern design service.

Aluminum Metal Injection Casting : This method is pouring the melted metal into a mould made from steel or a special quality iron and filling in the gap between mould and core.

Aluminum is the most used metal after iron and steel in the world. Since aluminum is a light and easy- treatable material, it has an important place in automotive and construction machinery sectors.
